The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/582,587	Applicant(s) PORADOSU, ENRIQUE	
	Examiner Leigh C. Maier	Art Unit 1623	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Theoharides et al (Exp. Opin. Invest. Drugs, 2001) and Tardieu et al (1994).

The claims are drawn to the administration of sulodexide for the treatment of interstitial cystitis (IC). Sulodexide is known in the art as a combination of glycosaminoglycans comprising 80% “fast moving heparin” (an accepted term of art and inherent in heparin, per se) and 20% of dermatan sulfate. It is noted that Applicant’s definition of sulodexide is somewhat more broad, allowing for a range of 60% to 90% of fast moving heparin with the balance being dermatan sulfate.

Theoharides teaches that glycosaminoglycans, such as heparin as mucosal surface protectors in the treatment of IC. See Section 8. The reference does not teach the administration of sulodexide.

Tardieu teaches that sulodexide is used essentially in the same manner as heparin in various therapeutic treatments. See abstract. The reference further teaches that this heparin-like

Art Unit: 1623

agent is essentially the same as heparin qualitatively with some quantitative differences. See Discussion at pp 297-299.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to administer sulodexide to a patient for the treatment of IC because heparin is known for the treatment of this disorder, and it had been established in the art that this heparin-like agent is qualitatively the same as heparin in therapeutic use. Therefore, one of ordinary skill would reasonably expect success in substituting sulodexide for heparin in this therapeutic method.
